## Section 9

### Multi-line residential customers

The number of multi-line residential customers is shown by wire center in Excel workbook files sbfl\_la.xls, sbga\_la.xls, sbnc\_la.xls, sbsc\_la.xls, scal\_la.xls, scky\_la.xls, scla\_la.xls, scms\_la.xls, and sctn\_la.xls. Summary level data for each study area is shown in file bstr\_mn2.xls. This information is considered confidential as noted in the "Designation of Confidential Information" statement.

## Section 10

## Poles

Following is the requested information for the cost of installing a 40-foot pole:

	M A	TERIAL	LABOR	TOTAL
AL	\$	254.75	\$ 160.61	\$ 415.36
FL	\$	213.82	\$ 196.64	\$ 410.46
G A	\$	210.05	\$ 176.92	\$ 386.97
KY	\$	247.82	\$ 172.31	\$ 420.13
LA	\$	204.35	\$ 154.18	\$ 358.53
MS	\$	209.56	\$ 146.05	\$ 355.61
NC	\$	211.10	\$ 165.36	\$ 376.46
S C	\$	233.68	\$ 151.76	\$ 385.44
TN	\$	212.73	\$ 192.10	\$ 404.83

## Section 11

### Detailed continuing property records

Detailed continuing property records for the items requested is contained in an ASCII formatted file with comma delimiters as file bsdcpr.csv. A translation table of ECNDR codes is being provided as a sheet in Excel workbook bsdcpr.xls. This Excel workbook file also contains the same continuing property records data as provided in file bsdcpr.csv. A paper copy of these files is not being provided since a printout would be approximately 260 pages. This information is considered confidential as noted in the "Designation of Confidential Information" statement.

Section 12
Digital switches

The information regarding digital switches is being provided in an Excel workbook file bsswitch2.xls. A paper copy of this file is also being provided, with the file name appearing in the lower right hand corner of each page. This information is considered confidential as noted in the "Designation of Confidential Information" statement.

### Section 13

## Contracts with switching manufacturers

A paper copy of contracts with switching vendors is being provided. This information is considered confidential as noted in the "Designation of Confidential Information" statement.

# Section 14 Digital line carrier devices

Information concerning digital loop electronics equipment is being provided as an Excel spreadsheet named bsdle2.xls for 1995 and 1995. The number of lines served after 12 months is not available since the database with this information is dynamic and no historical record is kept of line counts. The line counts shown in the file represent the initial engineering estimate of the number of equipped lines. A paper copy of this information is not being provided because of the extensive length of such a printout. This information is considered confidential as noted in the "Designation of Confidential Information" statement.

#### Section 15

### Drop lines

BST has an engineering guideline published to aid Outside Plant Engineers in sizing drop facilities. The following is in response to questions posed.

- (a) The copper pairs/living unit criteria can be found in Exhibit E (attached) of RL 92-08-012BT. This exhibit indicates that the average residential area (including multifamily dwelling) should be sized from 1.5 to 1.8 lines per ultimate living unit. Upscale developments may require 2 or more pairs per living unit, however, these represent only a small percentage of the total cable placements.
- (b) Fiber DS0 transmission channels per/living unit is based on the same criteria as copper pairs. See Exhibit E of RL 92-08-012BT above for recommended sizing.
- (c) The pair design criteria is the same for both aerial and buried plant.

RL: 92-06-012BT EXHIBIT E

27

#### DISTRIBUTION CABLE SIZING

# PERCENTAGE OF RESIDENTIAL LINES DISTRIBUTED BY ADDITIONAL LINE PENETRATION

#### **RESIDENTIAL ADDITIONAL LINES PERCENTAGES**

	0-5%	5-10%	10-15%	15-20%	20-30%	30-40%	40-60%	60-80%	80-100%

UNITS PER 25 PAIRS	17	16	14	14	12	12	10	9	8

RECOMMENDED SIZING PROVIDES FOR 2 DEFECTIVE PLUS 1 REMAINING SPARE OVER THE EXISTING ADDITIONAL LINES USAGE.

Netice

Not for use or disclosure outside BellSouth or any of its subsidiaries except under written agreement

Printed in U.S.A.

Section 15

# Section 16 Maintenance expenses

Maintenance expenses are incorporated into BST's cost studies by using expense loading factors developed from accounting records. Following is a brief explanation of how maintenance expense factors are developed.

The Plant Specific Expense Factors are ratios of maintenance-type expenses by plant category to the respective plant investment. The factors are based on three years of projected expense and investment data. Rent expense is excluded from building expense; net rent (rent revenue less rent expense) is included in pole and conduit expenses. Right to use and service order-related expense were excluded since such expenses are recovered in a direct manner rather than through the use of a factor. Power expense loadings are then added to the factors for central office equipment investment. These plant specific expense factor calculations result in a factor for each category of plant representative of the average expense per investment expected in the future for each plant category.

The Excel workbook file bsload.xls contains a sheet labeled PLANT SPEC with the maintenance expenses loading factors used by BST. These loading factors, where applicable, were used in all costs studies submitted to the state commissions during the course of Section 271 proceedings. Since the maintenance loading factors themselves were not presented in state dockets, a list of the dockets is not being provided. If the Commission finds that a list of the Section 271 dockets would somehow aid in decisions being made in this proceeding, a list can be prepared upon request.

A paper copy of the Excel sheet containing the expense loading factors for outside plant is also included, with the name of the sheet and the Excel workbook file name appearing in the lower right hand corner.

## Section 17

## Riser cable

Following are answers to the riser cable questions:

- a.) Riser cable is installed in multi-unit residential housing and commercial buildings when the property owner requests that network demarcation points be established within the leased premises.
- b.) When riser cable is installed as noted above, 100% is considered part of the regulated total plant in service.

## Section 18

Residential single-line business and multi-line business customers.

The information requested is contained in the Excel workbook file bstr\_mn2.xls.

Section 19
Miles served by wire center

The number of miles served by wire center is contained in Excel workbook files sbfl\_1a.xls, sbga\_1a.xls, sbnc\_1a.xls, sbsc\_1a.xls, scal\_1a.xls, scky\_1a.xls, scla\_1a.xls, scms\_1a.xls, and sctn\_1a.xls.

## Section 20 Cost of land and buildings

The cost of land and building by wire center and the number of switches is contained in Excel workbook files sbfl\_1a.xls, sbga\_1a.xls, sbnc\_1a.xls, sbsc\_1a.xls, scal\_1a.xls, scky\_1a.xls, scla\_1a.xls, scms\_1a.xls, and sctn\_1a.xls. The annual cost factors used in BST cost studies for each study area is contained in the Excel workbook file bsload.xls in a sheet named LAND & BLDG.

A paper copy of these files has been provided, with the file and sheet name displayed in the lower right hand corner.

### Section 21

## Contracts with digital line carrier manufacturers

A copy of contracts with digital line carrier manufacturers is being provided under confidential cover, as noted in the "Designation of Confidential Information" statement.
